Is your baby ready for RSV season?

What is RSV?

Respiratory Syncytial Virus (RSV) is a highly contagious virus that can lead to **respiratory infection** in babies.

- RSV is most common during winter virus season (fall–spring).
- It can be easily spread from a kiss or snuggling with a toy.
- At first, RSV can look like a mild, cold-like illness. As the infection spreads and worsens, it can lead to severe lung illnesses like bronchiolitis or pneumonia.
- Even though severe RSV is uncommon, it's still the top cause of hospital stays in babies under 1.

What is Beyfortus?

Beyfortus helps protect your baby from **serious RSV lung infections**. It's recommended for babies under age 1 born during or entering their first RSV season. And so far, over 6 million families have chosen Beyfortus.*

Beyfortus helps provide fast-acting protection for serious RSV lung infection that may need medical care, such as a doctor visit, urgent care, ER trips, or hospital stays. Beyfortus may not protect all children.

Beyfortus is a preventive antibody, not a vaccine. It provides ready-made antibodies to help your baby fight serious RSV, unlike vaccines that help teach the body to make its own.

Common side effects of Beyfortus include rash and pain, swelling, or hardness at the site of your baby's injection. Serious allergic reactions have happened with Beyfortus.

**Ask your baby's doctor about Beyfortus.
Before RSV.**

*Estimated based on sales data (through Oct 2024).

INDICATION

Beyfortus is a prescription medicine used to help prevent a serious lung disease caused by Respiratory Syncytial Virus (RSV) in:

- Newborns and babies under 1 year of age born during or entering their first RSV season.
- Children up to 24 months of age who remain at risk of severe RSV disease through their second RSV season.

IMPORTANT SAFETY INFORMATION

Your child should not take Beyfortus if your child has a history of serious allergic reactions to nirsevimab-alip or any of the ingredients in Beyfortus.

Please see additional Important Safety Information on the next page, and full Prescribing Information including Patient Information.

IMPORTANT SAFETY INFORMATION

Your child should not take Beyfortus if your child has a history of serious allergic reactions to nirsevimab-alip or any of the ingredients in Beyfortus.

Before your child receives Beyfortus, tell your healthcare provider about all of your child's medical conditions, including if your child:

- has ever had a reaction to Beyfortus.
- has bleeding or bruising problems. If your child has a problem with bleeding or bruises easily, an injection could cause a problem.

Tell your healthcare provider about all the medicines your child takes, including prescription and over-the-counter medicines, vitamins, and herbal supplements. Your infant should not receive a medicine called palivizumab if they have already received Beyfortus in the same RSV season.

Serious allergic reactions have happened with Beyfortus. Get medical help right away if your child has any of the following signs or symptoms of a serious allergic reaction:

- swelling of the face, mouth, or tongue
- difficulty swallowing or breathing
- unresponsiveness
- bluish color of skin, lips, or under fingernails
- muscle weakness
- severe rash, hives, or itching

The most common side effects of Beyfortus include rash and pain, swelling, or hardness at the site of your child's injection. These are not all the possible side effects of Beyfortus. Call your healthcare provider if you have questions about side effects.

Please see accompanying full Prescribing Information, including the Patient Information.
